1962 JOURNAL INDEX

This index contains a listing of feature articles appearing in the back issues of the Journal of Environmental Sciences for the calendar year of 1962.

The charges for these back issues are: Members $1.00 per copy, Non-Members $2.00 per copy. Please make checks payable to and order from the Institute of Environmental Sciences, 34 So. Main Street, Mount Prospect, Illinois.

FEBRUARY

Internal Environmental Simulator for a Man-Made System

Environmental Engineering for Operational Reliability of Ground Electronic Equipment Systems

APRIL

Vibration At Altitude

Long Leads With Piezoelectric Transducers

Temperature Control Fundamentals for Environmental Engineers

Space Simulation Facilities

Solar Radiation

JUNE

Sea-Level Simulation of Forced Convection Cooling at High Altitudes

Gas Evolution Rate Determination for Cat-A-Lac Flat Black Epoxy Paint

Structural Vibration in Space Vehicles

Typical Impulse Shock Loads

An Accurate Method of Automatically Plotting "g" Levels of Vibration Signals

AUGUST

Ion Gauge Characteristics In A Space Simulation Chamber

Surface Reactions During Metal Fatigue

Vacuum System Criteria For Space Environmental Simulation

Vibration Testing of Solid Propellant Rocket Motors

Acoustical Testing In A Liquid Environment

OCTOBER

A Thermal Radiation Heat Source and Imaging System

What Is Environmental Engineering?

Underground Corrosion of Steel

Transient Calibration of Piezoelectric Accelerometers

Vacuum System Criteriar for Space Environmental Simulation

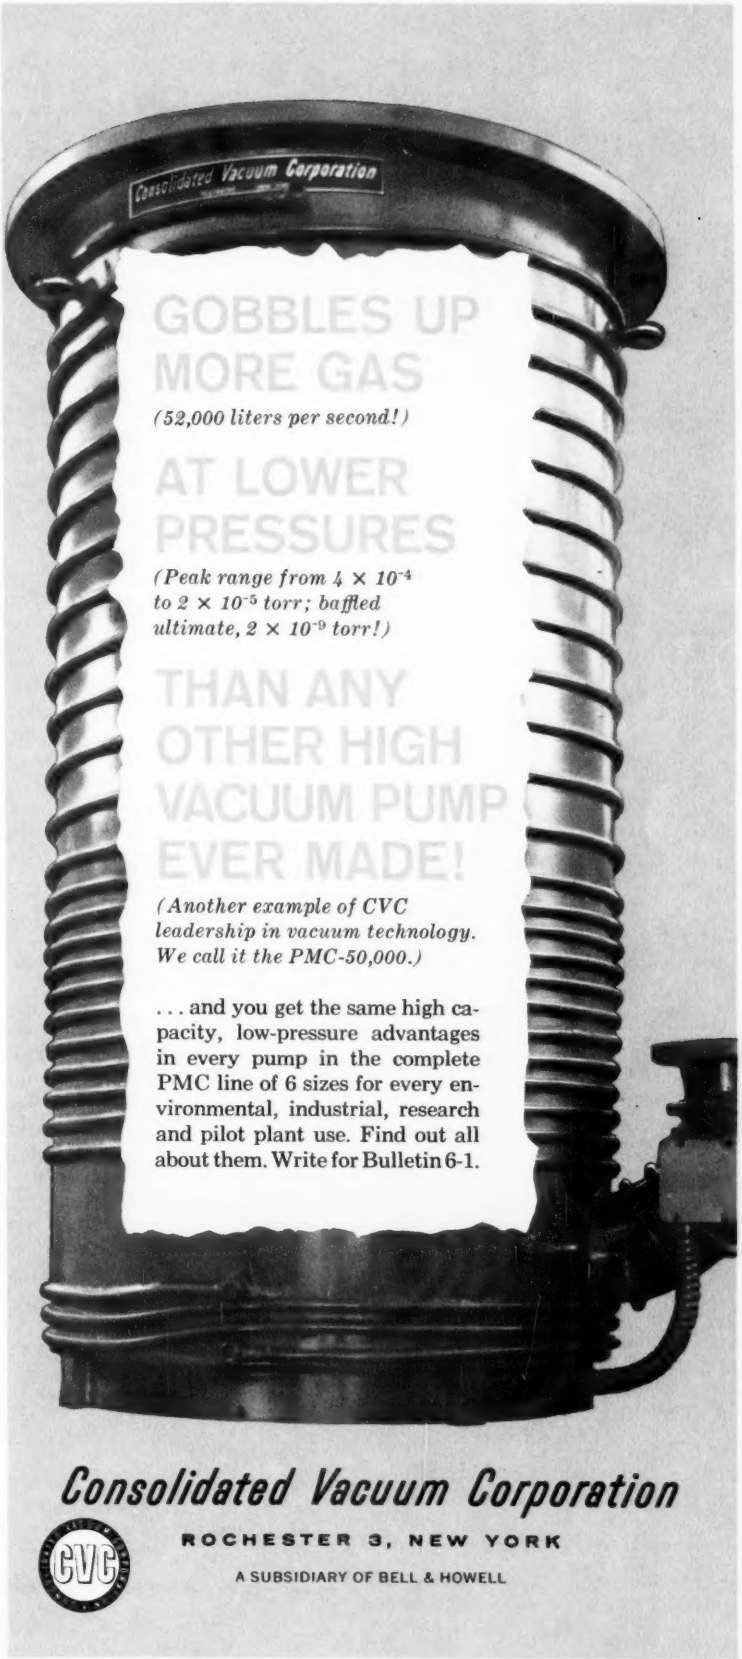
DECEMBER

International Conference on Environmental Test Standards

Vibration Evaluation of Viscoelastically Damped Printed-Circuit Boards

Design and Performance of a 3000 Cubic Foot Ultra High Vacuum Chamber

Ground Wind Effects on Mobile Missile System Design



Consolidated Vacuum Corporation
GOBBLES UP MORE GAS
(52,000 liters per second!)
AT LOWER PRESSURES
(Peak range from 4 × 10⁻⁴ to 2 × 10⁻⁵ torr; baffled ultimate, 2 × 10⁻⁹ torr!)
THAN ANY OTHER HIGH VACUUM PUMP EVER MADE!
(Another example of CVC leadership in vacuum technology. We call it the PMC-50,000.)
. . . and you get the same high capacity, low-pressure advantages in every pump in the complete PMC line of 6 sizes for every environmental, industrial, research and pilot plant use. Find out all about them. Write for Bulletin 6-1.
Consolidated Vacuum Corporation
